Matusiak Mikhailo

Vinnytsia National Agrarian University,

Candidate of Agricultural Sciences (PhD), Senior Lecturer, Ukraine

Socrates VNAU – the new online platform for improving the quality of student learning

Socrates is an electronic system containing the following blocks: Thesaurus and Webmaster Testing and Self-Preparation Systems; Electronic training base; Student's personal office; Teacher's personal office; Automated web sites of departments; ACS-Library; VNAU repository; ACS-Decanate; ACS-Medical Center; Statistics of work of students and teachers; VNAU Social Network.

The system of independent work and distance learning of VNAU can be implemented with the help of the tools of the electronic systems of management of the University "Socrates" and the distance learning of Moodle.

E-books, distance courses, tests, online webinars, internal e-mail, and the VNAU community allow for the formation of a scientific and educational environment. Among the modules of the system are the following:

WEB Accounting is a client-server multi-user program that allows you to quickly and efficiently study the logic and operations of any accounting system. It is fully integrated into the Socrates system (each student has his or her own work environment and teachers have the means to control project implementation). It is actively used for students of economic specialties.

The scientific-advisory educational interactive environment of VNAU is being developed with the help of the social network "VNAU Community". Training technologies are used to train university teachers. The methodology of Synergy training training (step-by-step teaching of teachers from traditional to innovative) was created. The author of the methodology is Ph.D., Associate Professor, Department of Economic Cybernetics department of innovative technologies in education of VNAU Kovalenko OO The methodology includes online tutorial assistance, a series of blogs, algorithms, instructions, cases, trainings and teaching

materials on innovative technologies in education. Trainings on innovative teaching methods include the latest teaching methods, use of active teaching methods, student motivation, practical use of social service tools, webinars.

Research works on innovative technologies in education are tested at international conferences, exhibitions, forums, online and offline seminars, presented in scientific articles, monographs, methodological developments.

MOODLE distance learning, the HSAU community, a number of group and personal blocks, and Wikipedia tools are used for distance learning of teachers and conducting online research projects.

The Socrates system contains a single database of students, faculty and staff. It is the University's global information base for: managing the learning process; accounting of students' knowledge; accounting of students' educational activity; Thesaurus and Webmaster knowledge testing systems; libraries; university repository; ebook creation.

The student's personal office contains the student's study card; methodological and electronic educational materials are arranged; electronic tests; own WEB- accounting program; WEB chat, microblogging, student forum. The powerful WEB Thesaurus self-study and knowledge testing systems allow teachers to create and use tests to control tests in a comfortable environment. Students have the opportunity to test workouts from any computer provided they have an Internet connection. Accounting for student tests, grades obtained; student work time in the system, use of methodological literature, work of teachers is carried out automatically and is presented in tabular and graphical form.
